Canteen Queues
A Better Way to Order

Understand Canteen Users

Student Personal

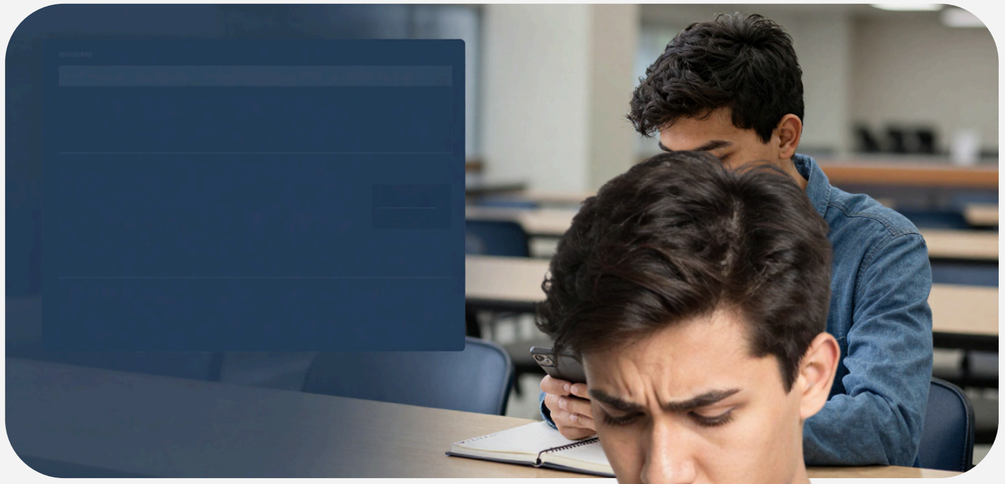

A first-year student with limited break time who buys lunch on campus between classes.

Research Questions

What causes the longest waits? When do students usually order? What information do they need before arriving?

Needs & Frustrations

Students need faster ordering, clear menu information, reliable pickup times, and less uncertainty in the queue.

Problem Statement

The Core Problem

First-year college students need a way to order food before reaching the canteen. Long queues during short breaks waste valuable time and make it difficult to get meals quickly.

Canteen Pre-Order App

Ideate: Different Ideas

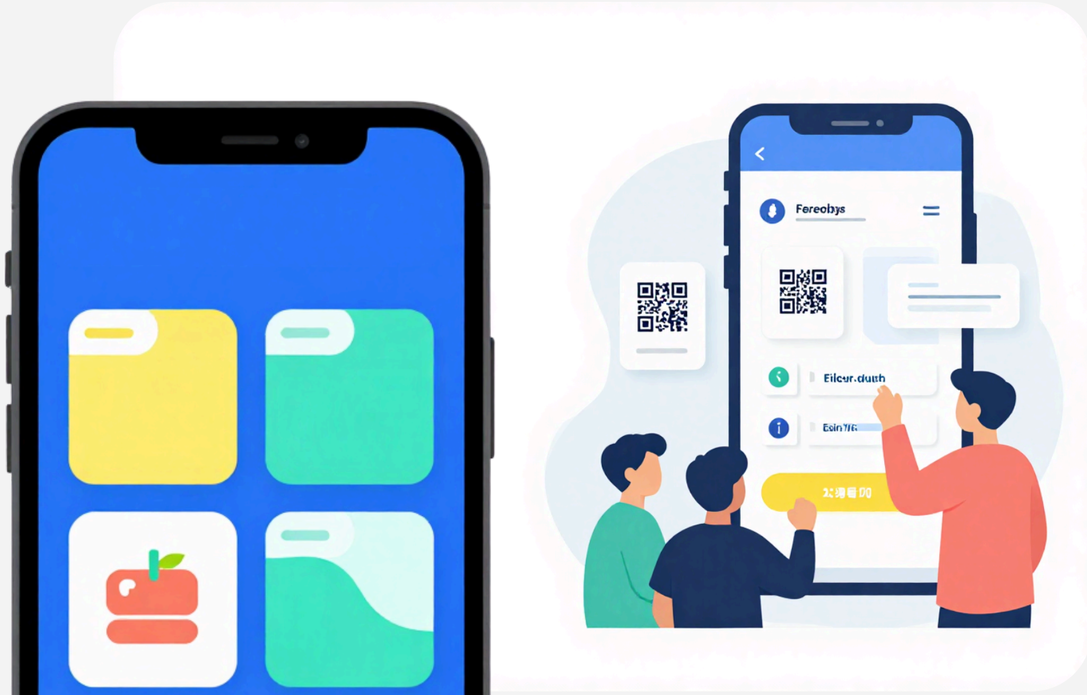

Brainstorming
Solutions

Five possible solutions: pre-order app, token ordering, QR ordering, separate online counter, and live queue status.

Best idea selected: a canteen pre-order app, giving students faster ordering and more break-time control.

Creative Problem Solving

We compared ideas by convenience, speed, accessibility, and impact on long canteen queues.

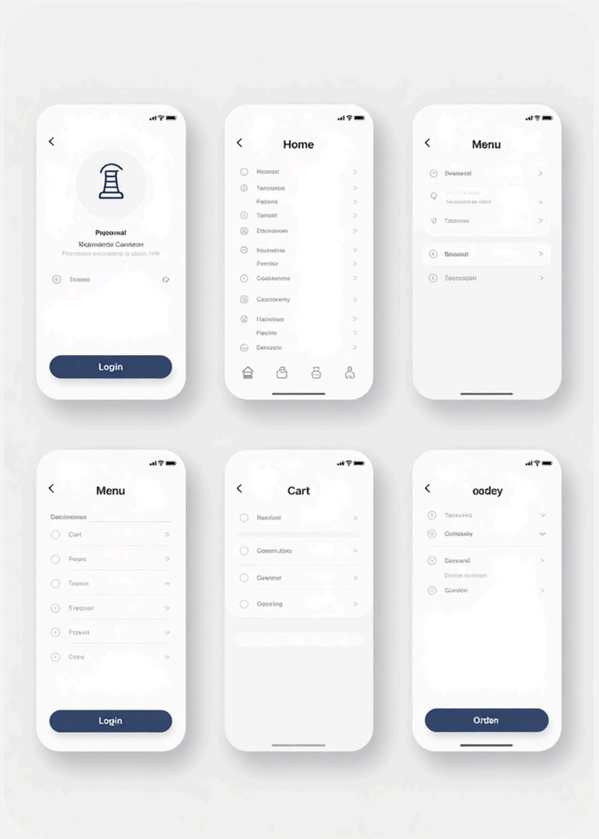

Prototype

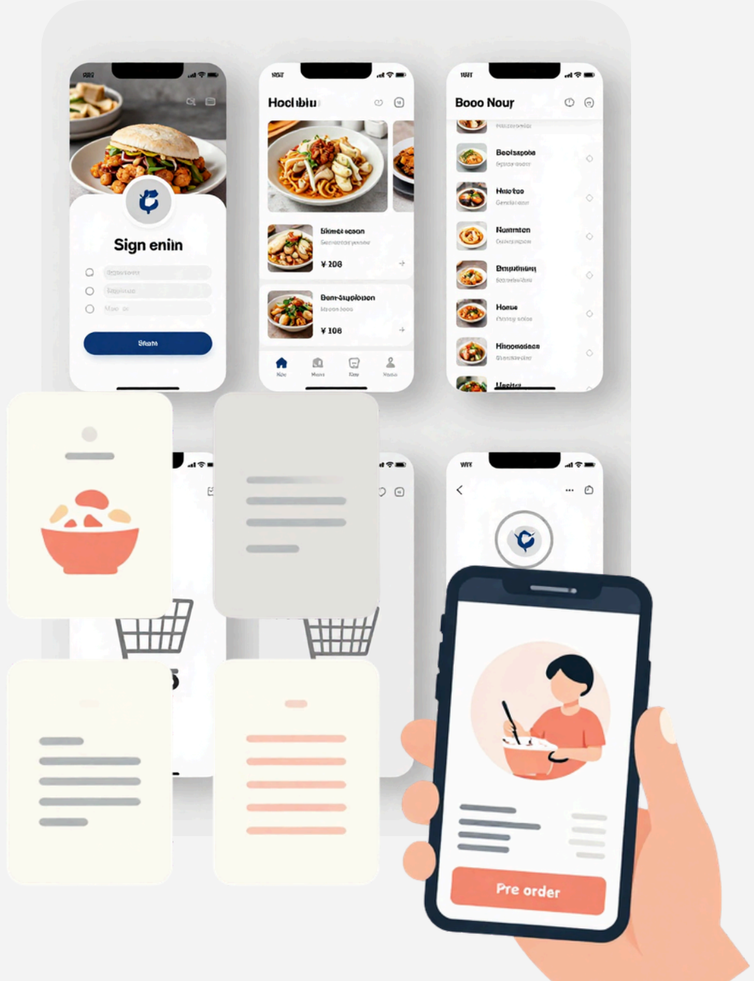

Canteen Pre-Order App UI Sketches

Core screens

Five basic screens map the ordering journey from sign-in to confirmation, helping students order before reaching the canteen.

Simple flow: choose food, review the cart, and confirm the order.

Login · Home/Menu · Menu
Cart · Order Confirmation

Testing the Prototype

3 Students Tested

Three first-year students tested the canteen pre-order app prototype during a break-time scenario.

Problems Found

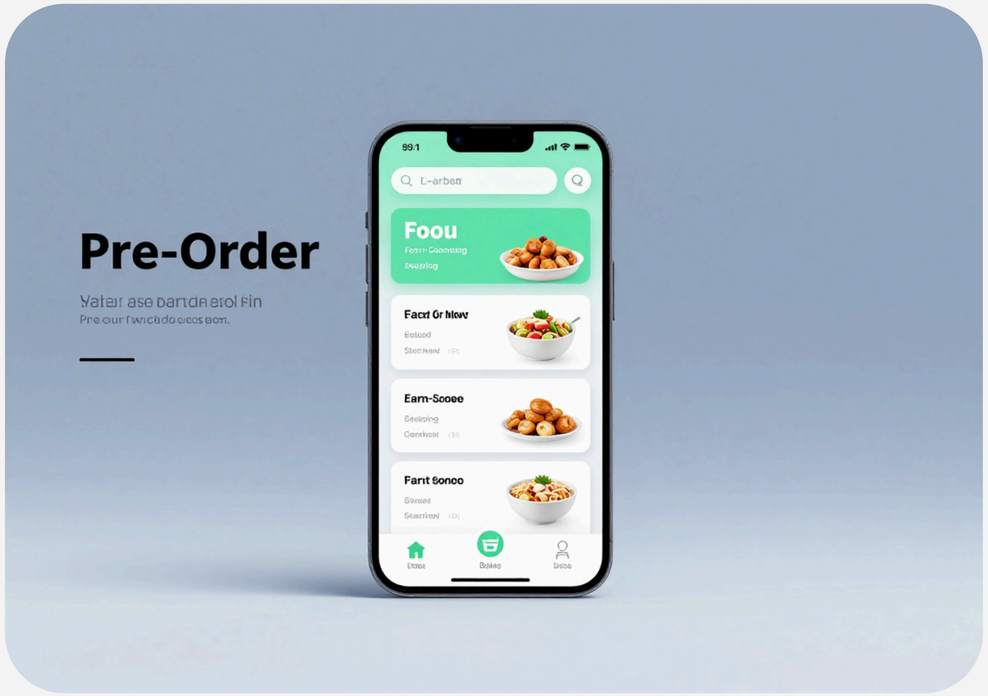

Users found the menu flow unclear, the cart easy to miss, and order status difficult to notice.

Suggested Improvements

Improve menu categories, make the cart more visible, and add a clearer order-status indicator.

Improved Solution

A clearer pre-order experience helps students save break time and collect meals with less waiting.

Canteen Pre-Order App

Final Solution &
Improvements

Visible cart and food categories make meal selection faster and easier. An order-status indicator keeps students informed from preparation to pickup.

The improved app reduces queue frustration by helping students order ahead, track progress, and collect food efficiently.
